

Resolution Guide: TKT-2024-009

Category: Slotting Optimization

Priority: Medium

Issue Description:

Slotting recommendations module suggesting moves that don't align with actual pick frequency data. High-velocity SKUs being recommended for slower pick zones and vice versa.

Step-by-Step Resolution Guide:

Step 1: Slotting algorithm using outdated velocity data.

Step 2: Fix implemented: 1) Updated item velocity calculations to use rolling 90-day average instead of static annual data 2) Refreshed ABC classification based on current pick frequency 3) Recalibrated slotting optimization weights for velocity vs.

Step 3: cube utilization 4) Generated new slotting recommendations with improved accuracy 5) Scheduled monthly automatic velocity updates.
